GEOTHERMAL FIELDS

OF_L01

Voices of the Earth

Iceland sits on a crack in the Earth's crust, and in some places you can hear it breathe. Geothermal Fields gathers 124 recordings made across the island's geothermal areas: the steaming slopes of Hverir near Mývatn, the boiling mud of Seltún in Krýsuvík, the highlands, and the Strokkur geyser in Haukadalur. They were captured in different seasons, to follow how these landscapes change through the year.

Mud pots chug, pop and gurgle, from a single slow bubble to whole fields of them. Fumaroles hiss and roar, and Strokkur gathers itself before it erupts. Alongside stereo and binaural ambiences, hydrophones go inside the boiling hot springs and a geophone listens underground, picking up the low, infrasonic rumble beneath the surface.

Raw, detailed material for sound design, film, games and music.
